Dear Public Health Laboratories

If your laboratory has an Applied Biosystems 7500FAST DX Real Time PCR System that is not covered through the APhL paid service contract program, your laboratory must either purchase an annual service contract or have a mechanism in place to perform the required calibration (OQ/PQ) services every six months. Life Technologies field service engineers are the only qualified personnel who can perform this calibration.

Life Technologies has provided a special public health laboratory service contract price of \$8,800.00 per year (plus applicable taxes). One year of coverage can be purchased at this special price. This price reflects a 34% discount from list price. No additional zone charges will be applied.

For more information about this special public health price, please contact your Life Technologies service sales representative at 1-800-327-3002, options 4 then 2, or email service.sales@lifetech.com. Please indicate you are from a public health laboratory.

Please note that this special pricing will be effective the date of this communication. Special pricing is not retroactive.

Best regards,
