FAST	2	See Comments	98001	0	0	(HGB) - A fast variant peak can suggest a form of alpha thalassemia. This most likely represents alpha thalassemia trait, but in rare instances can indicate hemoglobin H disease or alpha thalassemia disease. A repeat screen <u>IS NOT RECOMMENDED</u> as there is a higher incidence of false negative (or normal) results. If symptoms appear, a referral to the regional sickle cell center is recommended. Providers will receive a letter from the follow up program with contact information.
